1 Confidence intervals for univariate discrete-event simulation output using the Kalman filter
Randall B. Howard, Mark A. Gallagher, Kenneth W. Bauer, Peter S. Maybeck
December 1992 **Proceedings of the 24th conference on Winter simulation**

Full text available: pdf(737.93 KB) Additional Information: full citation, references, citings, index terms

2 Adaptive joint multiuser detection and channel estimation in multipath fading CDMA channels
Xiaodong Wang, H. Vincent Poor
November 1998 **Wireless Networks**, Volume 4 Issue 6

Full text available: pdf(387.24 KB) Additional Information: full citation, abstract, references, citings, index terms

The problem of joint multiuser detection and channel estimation in frequency-selective Rayleigh fading CDMA channels is considered. First the optimal multiuser detector for such channels is derived, which is seen to have a computational complexity exponential in the product of the number of users and the length of the transmitted data sequence. Two suboptimal detectors are then developed and analyzed, both of which employ decorrelating filters at the front-ends to eliminate the multiple-acc ...

3 A control-theoretic approach to flow control
S. Keshav
January 1995 **ACM SIGCOMM Computer Communication Review**, Volume 25 Issue 1

Full text available: pdf(1.32 MB) Additional Information: full citation, abstract, index terms

This paper presents a control-theoretic approach to reactive flow control in networks that do not reserve bandwidth. We assume a round-robin-like queue service discipline in the output queues of the network's switches, and propose deterministic and stochastic models for a single conversation in a network of such switches. These models motivate the Packet-Pair rate probing technique, and a provably stable rate-based flow control scheme. A Kalman state estimator is derived from discrete-time state ...

4 The computation of optical flow
S. S. Beauchemin, J. L. Barron
September 1995 **ACM Computing Surveys (CSUR)**, Volume 27 Issue 3

Full text available: pdf(3.06 MB) Additional Information: full citation, abstract, references, citings, index terms

Two-dimensional image motion is the projection of the three-dimensional motion of objects, relative to a visual sensor, onto its image plane. Sequences of time-orderedimages allow the estimation of projected two-dimensional image motion as either instantaneous image velocities or discrete image displacements. These are usually called the optical flow field or the image velocity field. Provided that optical flow is a reliable approximation to two-dimensional ...

5 SCAAT: incremental tracking with incomplete information
Greg Welch, Gary Bishop
August 1997 **Proceedings of the 24th annual conference on Computer graphics and interactive techniques**

Full text available: pdf(104.69 KB) Additional Information: full citation, references, citings, index terms

Keywords: Kalman filter, autocalibration, calibration, delay, feature tracking, latency, sensor fusion, virtual environments tracking

6 A control-theoretic approach to flow control
Srinivasan Keshav
August 1991 **ACM SIGCOMM Computer Communication Review , Proceedings of the conference on Communications architecture & protocols**, Volume 21 Issue 4
Full text available: pdf(1.48 MB) Additional Information: full citation, references, citings, index terms

7 Real-time estimation of the parameters of long-range dependence
Matthew Roughan, Darryl Veitch, Patrice Abry
August 2000 **IEEE/ACM Transactions on Networking (TON)**, Volume 8 Issue 4
Full text available: pdf(237.43 KB) Additional Information: full citation, references, citings, index terms

Keywords: Hurst parameter, estimation, fractal, long-range dependence, on-line, real-time, self-similar, traffic modeling, wavelets

8 Subspace methods for blind joint channel estimation and multiuser detection in CDMA systems
Xiaodong Wang, H. Vincent Poor
January 2000 **Wireless Networks**, Volume 6 Issue 1
Full text available: pdf(249.64 KB) Additional Information: full citation, abstract, references, index terms

Recently developed subspace techniques for blind adaptive multiuser detection are briefly reviewed first. In particular, blind methods based on signal subspace tracking for adapting linear multiuser detectors in AWGN CDMA channels are considered, as well as extensions of these techniques to frequency selective fading channels, dispersive channels, and antenna array spatial processing. In addition, subspace‐based nonlinear adaptive techniques for robust blind multiuser detection in non& ...

9 Parameter identification methods for metamodeling simulations
Don Caughlin
November 1996 **Proceedings of the 28th conference on Winter simulation**
Full text available: pdf(714.50 KB) Additional Information: full citation, references

10 Improving static and dynamic registration in an optical see-through HMD
Ronald Azuma, Gary Bishop
July 1994 **Proceedings of the 21st annual conference on Computer graphics and interactive techniques**
Full text available: pdf(321.33 KB) ps(1.65 MB) Additional Information: full citation, abstract, references, citings, index terms

In Augmented Reality, see-through HMDs superimpose virtual 3D objects on the real world. This technology has the potential to enhance a user's perception and interaction with the real world. However, many Augmented Reality applications will not be accepted until we can accurately register virtual objects with their real counterparts. In previous systems, such registration was achieved only from a limited range of viewpoints, when the user kept his head still. This paper offers improved regi ...

Keywords: augmented reality, calibration, registration

11 3D position, attitude and shape input using video tracking of hands and lips
Andrew Blake, Michael Isard
July 1994 **Proceedings of the 21st annual conference on Computer graphics and interactive techniques**

Full text available: pdf(341.03 KB) ps(1.65 MB) Additional Information: full citation, abstract, references, citings, index terms

Recent developments in video-tracking allow the outlines of moving, natural objects in a video-camera input stream to be tracked live, at full video-rate. Previous systems have been available to do this for specially illuminated objects or for naturally illuminated but polyhedral objects. Other systems have been able to track nonpolyhedral objects in motion, in some cases from live video, but following only centroids or key-points rather than tracking whole curves. The system described here ...

12 Stochastic version of second-order (Newton-Raphson) optimization using only function measurements
James C. Spall
December 1995 **Proceedings of the 27th conference on Winter simulation**

Full text available: pdf(579.39 KB) Additional Information: full citation, references, index terms

13 A frequency-domain analysis of head-motion prediction
Ronald Azuma, Gary Bishop
September 1995 **Proceedings of the 22nd annual conference on Computer graphics and interactive techniques**

Full text available: pdf(401.93 KB) ps(629.89 KB) Additional Information: full citation, references, citings, index terms

Keywords: HMD, augmented reality, delay compensation, spectral analysis

14 Ada Compiler Evaluation Capability (ACEC) data analysis: an overview
Air Force Systems Command
January 1990 **ACM SIGAda Ada Letters , Proceedings of the working group on Ada performance issues 1990**, Volume X Issue 3

Full text available: pdf(1.08 MB) Additional Information: full citation, references, index terms

15 Papers: ESW4: enhanced scheme for WWW computing in wireless communication environments
Stathes Hadjiefthymiades, Lazaros Merakos
October 1999 **ACM SIGCOMM Computer Communication Review**, Volume 29 Issue 5

Full text available: pdf(1.18 MB) Additional Information: full citation, abstract, references, citings

Mobile computing is considered of major importance to the computing industry for the forthcoming years due to the progress in the wireless communications domain. In this paper, we present a proxy-based architecture, called ESW4, which manages to accelerate Web browsing in wireless CPNs. Proxy caches, maintained in base stations, are constantly relocated to accompany the roaming user. We discuss a cache management scheme involving the relocation of full caches to the most candidate cells but also ...

16 On hop-by-hop rate-based congestion control
Partho Pratim Mishra, Hemant Kanakia, Satish K. Tripathi
April 1996 **IEEE/ACM Transactions on Networking (TON)**, Volume 4 Issue 2

Full text available: pdf(1.51 MB) Additional Information: full citation, references, index terms

17 Real-time APL prototype of a GPS system
Henry M. Beisner, Jack G. Rudd, Robert H. Benner
June 1996 **ACM SIGAPL APL Quote Quad , Proceedings of the conference on Designing the future**, Volume 26 Issue 4

Full text available: pdf(822.15 KB) Additional Information: full citation, abstract, references, citings, index terms

The Global Positioning System (GPS) consists of a constellation of 24 high-altitude satellites with very accurate atomic clocks, along with a global network of satellite tracking stations and sophisticated ground processing stations, that together provide precise navigation coordinates to any user who possesses a small, readily available GPS receiver.The precision that is achieved depends on[1] the number of GPS satellites in view of the user and the geometries involved;[2] the design of the use ...

18 The ControlShell component-based real-time programming system, and its application to the Marsokhod Martian Rover

Stan Schneider, Vincent Chen, Jay Steele, Gerardo Pardo-Castellote

November 1995 **ACM SIGPLAN Notices , Proceedings of the ACM SIGPLAN 1995 workshop on Languages, compilers, & tools for real-time systems**, Volume 30 Issue 11

Full text available: pdf(1.39 MB) Additional Information: full citation, abstract, references, index terms

Real-time system software is notoriously hard to share and reuse. This paper walks through the methodology and application of ControlShell, a component-based programming system for real-time system software development. ControlShell combines graphical system-building tools, an execution-time configuration manager, a real-time matrix package, and an object name service into an integrated development environment. It targets complex systems that require on-line reconfiguration and strategic control ...

19 The CMUnited-97 robotic soccer team: perception and multiagent control

Manuela Veloso, Peter Stone, Kwun Han

May 1998 **Proceedings of the second international conference on Autonomous agents**

Full text available: pdf(1.00 MB) Additional Information: full citation, references, citings, index terms

1 Selected topics in CAD systems: Rapid prototyping using high density interconnects
Richard Hartley, Kenneth Welles, Michael Hartman, Paul Delano, Abhijit Chatterjee
March 1990 **Proceedings of the conference on European design automation**

Full text available: pdf(530.53 KB) Additional Information: full citation, abstract, references

This paper introduces the (DIODES) system for the rapid prototyping of DSP electronic systems. DIODES merges silicon compiler and high-density interconnect technology with the goal of prototyping hardware systems as quickly as possible --- within one day. Working from a high-level algorithmic description of a DSP algorithm, DIODES will determine which chips from an inventory of specially designed chips are needed to implement the design. These chips are then placed on a prepared substrate and ro ...

2 Confidence intervals for univariate discrete-event simulation output using the Kalman filter
Randall B. Howard, Mark A. Gallagher, Kenneth W. Bauer, Peter S. Maybeck
December 1992 **Proceedings of the 24th conference on Winter simulation**

Full text available: pdf(737.93 KB) Additional Information: full citation, references, citings, index terms

3 Estimation of motion and position of a rigid object using a sequence of images (tridimensional Kalman filter approach)
R. Vasquez, J. Mayora
April 1999 **Proceedings of the 19th annual conference on Computer Science**

Full text available: pdf(598.01 KB) Additional Information: full citation, references
